

# ZycoShield<sup>®</sup>

## Foliar Protection

**Zydex**<sup>®</sup>  
Innovating for Sustainability

Zydex's new biotechnology - ZycoShield, offers farmers the combined benefit of crop protection and growth. It protects agricultural crops from abiotic stresses caused by high temperatures, winds, and dry spells, which can result in poor growth. This biotechnology enhances photosynthesis and boosts plant resilience against these stresses. The remarkable performance of ZycoShield is noticeable within 7-15 days of its foliar application.

# ZycoShield®

## Foliar Protection

### Benefits:

- Healthier crops with greener foliage
- Wider and thicker leaves
- Enhanced growth and reduced flower dropping
- Improved overall crop health

**Dosage:** 2.5-3 lbs/acre

### Application method:

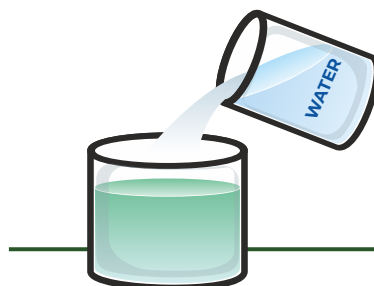

12-24 hours

# 1

Dissolve ZycoShield in 5-10 gallons of water and leave overnight for 12-24 hours

# 2

Add adequate water for 1 acre coverage

# 3

Apply as a foliar spray every fortnight while ensuring complete crop canopy coverage
